SEED ROUND · JULY 2026

Ledgerline

Automated settlement reconciliation for B2B payments.

We match processor settlement files against merchant ledgers automatically — per settlement run, in minutes, with every break explained.

€41K MRR

14 design partners

3 public pricing tiers

THE PROBLEM

Reconciliation is where finance teams go to die

Founded January 2025 · 18 months of engineering

Every settlement cycle, processor payout files and the merchant's own ledger disagree — partial captures, refunds landing in the wrong period, FX rounding, fee drift. Mid-market finance teams reconcile this **by hand, in spreadsheets, every single week.**

We lived this problem before we founded the company to kill it.

2–4 days

per month lost to manual matching at a typical mid-market merchant

0.4–1.1%

of settlement volume stuck in unexplained breaks at any time

THE PRODUCT

Live today. Billing today.

Ledgerline ingests settlement and payout records from payment processors, matches them against the merchant's ledger deterministically, and surfaces every break with its root cause attached.

- Billed per settlement run — usage-priced, no seats
- Exception queues that shrink instead of scroll
- Audit trail your accountants stop arguing with
- **Self-serve Stripe checkout, live on ledgerline.dev right now** — three public tiers at €89 / €229 / €640 per month

ledgerline — run #482 · PSP: primary acquirer · 2026-07-02

SETTLEMENT LINE	LEDGER ENTRY	Δ	STATUS
payout 2026-07-01 · €12,410.20	batch 7741 · €12,410.20	0.00	matched
payout 2026-07-01 · €3,997.51	batch 7742 · €4,008.11	−10.60	fee drift
refund r-2231 · −€219.00	— not booked —	−219.00	period break
payout 2026-07-02 · €8,864.77	batch 7743 · €8,864.77	0.00	matched

98.6% auto-matched · 2 exceptions routed with root cause

TEAM

12 employees. Zero tourists.

Twelve people across Berlin and remote — engineering-heavy by design, because reconciliation is won in the matching engine, not in the sales deck.

DR

Daniel Rehmke

Founder & CEO

Second-time operator. Ran settlement ops tooling at a prior venture; built the first matching engine himself.

MV

Mara Vogel

Founding Engineer

Matching engine, exception queues, and the audit trail underneath both. Previously payments infrastructure.

JP

Jonas Pfeiffer

Solutions Lead

Owns onboarding and the design-partner program end to end. Ex-finance-ops at a mid-market merchant.

DEFENSIBILITY

The mark is filed. The moat is the data.

Every reconciliation run teaches the engine another processor quirk, another format drift, another edge case no competitor has seen. The matching corpus compounds — and it never resets.

- Ledgerline® application on file — serial 98/441,207, filed 2026-04-08, attorney of record
- Proprietary break-classification taxonomy, built from live runs
- Processor integrations hardened against real settlement traffic

What we replace

Spreadsheets + temp staff — the incumbent in 9 of 10 mid-market finance teams.

Consultant-built scripts — break silently the day a processor changes a file format.

Enterprise recon suites — built for banks, priced for banks, 9-month deployments.

MARKET

A €2.4B problem hiding in the back office

Bottom-up:

43K
EU mid-market merchants processing enough volume to feel the pain

€4.6K
achievable ACV at today's public pricing

€200M
serviceable market, before processors and marketplaces

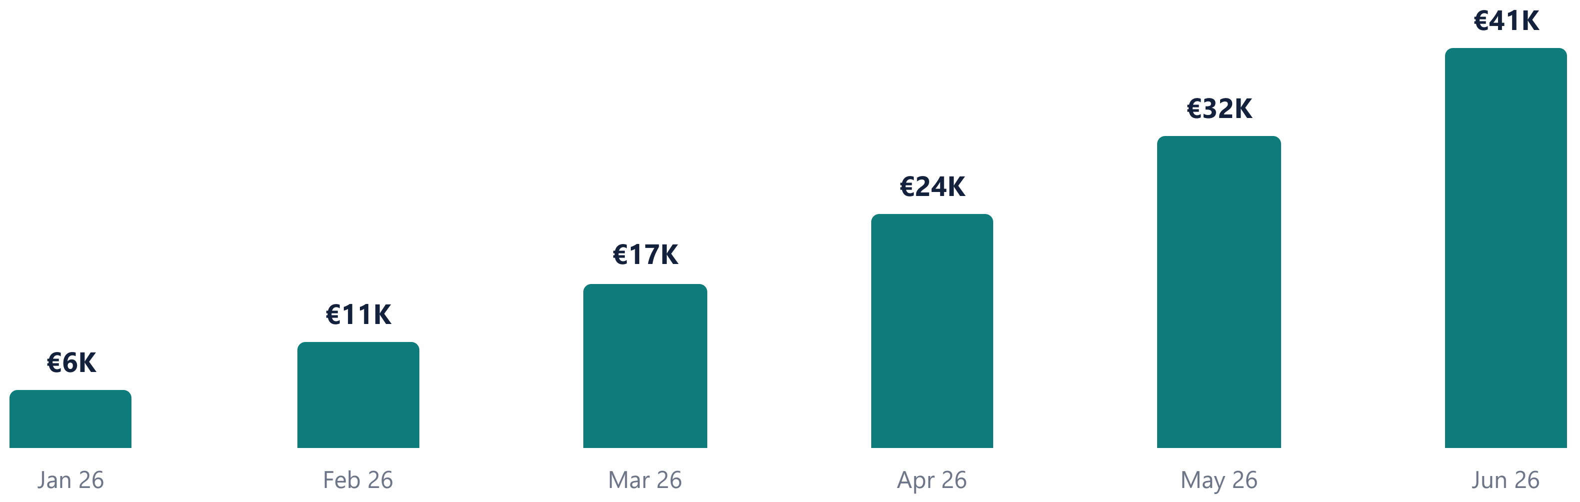
Within a **€2.4B addressable market** across European payment operations tooling.

The category is being priced now

Tallystack raised at a €60M post in this exact wedge. Capital is moving into settlement infrastructure — PSD3, instant settlement rails and processor consolidation are multiplying reconciliation complexity faster than finance teams can hire.

TRACTION

Revenue is compounding monthly



Usage-based pricing means revenue tracks real reconciliation volume — up **+28% month-over-month average** since first billing, driven by expansion inside existing accounts and an inbound-heavy pipeline.

€41K MRR, June 2026 · 12 employees · founded January 2025

The numbers behind the curve

€180K	14	<2%	4.1x
qualified pipeline	design partners	monthly logo churn	LTV : CAC

Retention is the story. Once a finance team stops reconciling by hand, they do not go back — churn is effectively limited to companies that stop processing payments altogether.

Expansion is built in. Usage-based pricing means every new processor integration and every increase in settlement volume grows the account without a sales touch.

THE ASK

Raising our seed round

We are raising a seed round to own European mid-market settlement reconciliation before the category consolidates around someone else. The round funds 24 months of runway to three milestones:

- **150 paying accounts** — convert the design-partner base and the inbound pipeline
- **Processor coverage** — the three integrations that unlock 70% of EU mid-market volume
- **SOC 2** — the certification mid-market buyers require to sign annual contracts

Use of funds:
